

Perc n Phos with glyphosate

Perc n Phos is a "true biostimulant," enhances plant metabolism, stimulates root activity and increases a crop's energy level. Glyphosate is a systemic herbicide, absorbed and translocated to the roots of all plants. In glyphosate tolerant crops, the crop sustains less harm than the targeted weeds. Perc n Phos will enhance the metabolism of all plants treated, crop and weeds alike. An actively growing weed is more susceptible to glyphosate. An actively growing crop will metabolize glyphosate more quickly.

Why not improve glyphosate activity and improve crop energy by adding Perc n Phos to your glyphosate application?

.9 L glyphosate with .4 L Perc n Phos
3 days after treatment

.9 L glyphosate with .4 L Perc n Phos
7 days after treatment
