

# CANGROW nitroK mag

Can Grow Crop Solutions specializes in creating effective and complete programs to maximize and maintain plant health. Our combinations of nutrients and bio stimulants, applied at targeted growth stages, capture yield potential. We strive to alleviate the plant stress caused by herbicide applications and weather extremes to allow crops to power through to yield.

**NitroK Mag** is Can Grow's premier sidedress nutrient program. It contains the amine form of nitrogen, potassium and magnesium as well as critical micronutrients and bio stimulants. Can Grow uses amine N as it is the form of N most easily taken up and requires no conversion within the plant—increasing plant efficiency. Potassium uptake begins to rapidly increase at sidedress time—we include K in the sidedress band for maximum availability. Magnesium is one of the nutrients plants use to run the pump that moves sugars into the kernels. Including magnesium ensures efficient sugar movement to the desired locations in the plant.

**NitroK Mag** formulations also include:

- Perc Plus** to increase plant metabolism and nutrient use efficiency
- Thrust** to increased uptake and impact of all nutrients in the solution and stabilize the N
- Bio-Forge** to relieve and prevent stress in critical growth stages prior pollination
- Zinc** to increase zinc levels in the plant
- Manganese** to deal with glyphosate issues
- Boron** to increase kernel set and retention

**20-0-5-1Mg**

**16-0-6-1Mg**

**18-0-6-1Mg**

**10-0-8-1Mg**
