

CAN GROW *power start*

The **PowerStart** family of products are neutral, low pH forming solutions of nitrogen, phosphorous, potassium, sulfur. Included is **Bio-Forge**, **PercPlus** and critical micronutrients zinc, manganese, and copper. For use in furrow or as a side band at planting for wheat or corn.

5-18-3-2S

6-22-3-2S

Weather extremes and unpredictable planting conditions cause plant stress. Controlling that stress is key to maximizing the potential of every seed.

PowerStart contains unique chemistry to affect plant development

- Critical micronutrients for early plant growth
- Amine chemistry to improve early root growth
- Factors to maintain hormonal balance in young plants
- Specific amino acids and enzymes that ramp up plant metabolism, resulting in controlled root development and increased seedling vigor—setting the stage for higher yield potential
- Phosphorylase to improve plant utilization of phosphate

PowerStart improves seedling emergence under stress conditions, increases plant vigor, and drives roots into the soil.
