

Side-dress or stream band

Nitrogen (N), potassium (K), and magnesium (Mg) are essential nutrients for plant growth and development. The demand for both N and K ramp up at similar times in crops' life cycles. Including K with N increases nitrogen use efficiency through improved uptake and utilization. Magnesium is critical in optimizing photosynthesis.

Supply N, K, and Mg at the right time.

Benefits

- NitroKMag solutions supply highly efficient nitrogen, potassium, and magnesium at a critical stage in the crop life cycle.
- Ammonium N provides stable and efficient nitrogen.
- Contains BioLiNE Gold fulvic acid for maximum uptake and efficiency.
- Can be customized with additional micronutrients (Zn, Mn, B) and CanGrow actives and stress supporters.

Application

- Available as a CanGrow complete package that supplies all N needs at 40-60 gal/ac or as a "Plus Up" at 10-20 gal/ac with UAN.
- Can be applied to multiple crops through side-dress, stream band, and Y-drop.

Standard blends:

25-0-2.5 0.5Mg

22-0-5 1Mg

10-0-8 1Mg (Plus Up UAN)

4-0-10 1.5Mg (Plus Up UAN)

- Custom blends available.
