

**Starter: in furrow, side band,
or stream band**

As seeds germinate, radicle roots sense the fertility in the environment around them. Yield potential can be affected as early as emergence based on nutrient availability around these early roots. PowerStart solutions optimize plant emergence, vigour, and yield potential.

Optimize emergence, vigour, and early root development.

Benefits

- PowerStart products are neutral, low pH-forming NPKS solutions that provide critical nutrient availability.
- Includes plant-available sulfur to support microbial systems and plant needs, especially in early planting and cold environments.
- Contains BioLiNE Gold fulvic acid for stress support, plus CanGrow actives for increased plant metabolism.
- Can be customized with additional micronutrients including zinc, magnesium, and manganese.

Application

- In furrow 5-7 gal/ac.
- PowerStart 6-21-3 2S - the standard for all crops and conditions.
- PowerStart 5-18-3 2S - with additional stress relief and full micro package.
- PowerStart 3-10-10 3.5S - great fit for soys or edibles with use rate of 2-3 gal/ac.
- Custom blends available.
