

max Impact

Foliar

Phosphorus (P) is a critical element for plant nutrition. It is involved in several key plant functions, including energy transfer, photosynthesis, the transformation of sugars and starches, nutrient movement within the plant and transfer of genetic characteristics from one generation to the next.

Support plant optimization through critical growth stages.

Benefits

- A cost-effective nutritional foliar built to increase plant energy ahead of critical reproductive stages to increase yield and quality.
- Supplies several micronutrients to support overall plant growth and the nutrient variability and availability seen in all fields.
- Formulated for rapid absorption and includes BioLiNE Gold fulvic acid for stress support and maximum uptake and efficiency.
- Provides the crop a root burst, stimulating root proliferation when environmental conditions are less than ideal.

Application

- Low use rate of 1 L per acre.
- Apply before or during reproductive phases and/or periods of abiotic stress.
- Safe to apply to any crop.
- Can be applied multiple times per season to support plant and environmental conditions.
- Compatible with a wide range of crop protection products.
