

## Start Strong

## Grow Strong

## Finish Strong

AGRONOMIC NEED

- reduce abiotic stresses
- address nutrient deficiencies
- manage nitrate nitrogen
- keep plants healthy

- bulk tubers
- skin set

initiate and develop tubers

protect seed

## Start Strong

### **Super Stay-Dry** seed piece treatment

Super Sta-Dry helps dry seed, keep planter cups dry, and provide added protection to keep plant vigour when it's most needed. Super Sta-Dry contains calcium enhanced with amino acids and enzymes for early seed growth and natural agents which promote drying and corking over.

### **PowerStart Row Support 6-21-3 2S** with micros in-furrow

Power Start is a phosphate activator that enhances plant vigour. It ramps up plant metabolism and boosts root development, tuber initiation and retention.

### **ReNew** in-furrow bio-fertility

Diverse team of beneficial microbes that provide plant enhancement capabilities including vitamin/hormone production, nutrient releasers, and stress reducers.

## Grow Strong

### **UnLeash** bio-fertility & residue manager

The best of a microbial bio-fertility and residue manager/recycler all in one. Teams of organisms that release tied up soil nutrients and release nutrients from residue. Can be applied with crop protection products such as herbicides or fungicides.

### **UpStart Potato Hiller Mix** streamed on hill

Provides calcium to help prevent early root diseases and flocculate sodium out of the tuber zone. It's 400 times more soluble than gypsum. UpStart includes controlled release amine nitrogen, the form that encourages root growth instead of lush vegetative growth found with other N sources.

### **Peak Energy 4-20-0 0.9S 0.2Mg 0.6Zn 0.4Mn 0.2Fe 0.1Cu** foliar with fungicide

Built to increase plant energy and supply strong base of micronutrients. Peak Energy will help increase number of cells for overall higher yield potential.

### **Power S Mag** foliar

Nutritional support and disease control enhancement.

### **Cal PG** foliar

Calcium nutrition that supports eradication of late blight spores.

### **Pivot Power** with irrigation

Apply PivotPower with boron and zinc through the pivot 1, 2, or 3 times a season. PivotPower is designed to control plant growth through nutrition. It mitigates early die symptoms and continues sodium flocculation.

### **Mini Prosett** foliar

Full compliment of highly effective micros to alleviate nutrient deficiencies or address agronomic concerns including reducing herbicide stress, abiotic stress relief from too hot, dry or wet, re-invigorating roots.

## Finish Strong

### **CropKarb 8N 18K 0.375B** foliar

Includes boron to help set and hold more of the youngest fruit and potassium to improve size and bulking.

### **BioLINE Nexus Downloader** foliar

Apply late season to increase senescence and skin set.
