## Start Strong

### **SeedCoat** hopper treatment

Replaces talc/graphite plus provides nutritional component (2S, 2Zn, 2Mn) and vital amino acid and enzyme building blocks to promote early season biological activity around the seed and optimum early root development.

### **ReStore** seed treatment

Teams of naturally occurring microbes that promote germination, robust root mass and plant vigour. Microbes also offer bio-fertility, increase the availability of soil nutrients.

### **PowerStart** in-furrow 6-21-3 2S or 3-10-10 3.5S

Neutral starter that lowers pH in the root zone to release additional tied up nutrients. Contains BioLiNE Gold fulvic acid for early stress tolerance & increased nutrient uptake and CanGrow actives for optimum seed establishment. Additional micros (Zn, Mg, Mn) and stress relievers can be added for poor conditions.

### **ReNew** in-furrow bio-fertility

Diverse teams of beneficial microbes that provide plant enhancement including vitamin/hormone production, nutrient releasers, and stress reducers.

## Grow Strong

### **UnLeash** bio-fertility & residue manager

The best of a microbial bio-fertility and residue manager/recycler all in one. Teams of organisms that release tied-up soil and residue nutrients. Can be applied with crop protection products such as herbicides or fungicides.

### **Max Impact** foliar 4-20-0 0.9S 0.2Mg 0.6Zn 0.4Mn 0.2Fe 0.1Cu

Built to increase plant energy and supply a strong base of micronutrients going into reproductive stages to keep more flowers and develop more seeds per pod.

### **Manganese Plus**      **Boron Plus**      **CoMo** foliar

Full compliment of highly effective micros to alleviate nutrient deficiencies or address agronomic concerns including reducing herbicide stress, abiotic stress relief from too hot, dry or wet, re-invigorating roots or nodules.

## Finish Strong

### **CropKarb** foliar 8-0-18 0.375B

Apply at heavy blooming, sizing, or bulking to increase seed size and weight.

## Plus Up Partner Solutions

### **Soy Power Pack** plus-up partner

Combination of Zn, Mn and BioLiNE fulvic acid that can be added to competitor soybean starters for additional nutrient support and higher nutrient efficiency.

### **BioLiNE Gold** starter/foliar

Highly concentrated, pure fulvic acid that reduces plant abiotic stress and increases nutrient use efficiency. Highly compatible with competitor starters, foliar, fungicides, herbicides or insecticides.
