

## Maximize Biological Activity with CanGrow UnLeash®

CanGrow UnLeash® provides a combination of the best microbial bio-fertility team of CanGrow ReNew™ with the residue manager/recycler team of CanGrow MeltDown® all in one jug. CanGrow UnLeash® is the unmatched tool for any grower, compatible with most products, and can be added to an existing herbicide or fungicide pass. CanGrow UnLeash® was designed for those who do not have in-furrow liquid capabilities on their planter, but want to give their crops a biological kick start.

UnLeash®      Untreated

### CanGrow UnLeash® Benefits

- Increase soil health
- Improve crop vigor
- Facilitate better nutrient uptake
- Mitigate abiotic stress
- Improve yield potential
- Provide carbon that feeds the plant and soil microbial population
- Provide organic acids that help chelate micronutrient nutrition in the root zone
- Helps drive CO<sub>2</sub> cycling, promoting higher yields and healthier soils

### “Soil Your Undies” Challenge

Two pairs of 100% cotton briefs were buried in a field with two different treatment sections. When dug up, the pair that was buried in the area treated with CanGrow UnLeash® showed to be broken down more compared to the control. This shows the more soil microbes you have, the better your soil will perform.

CanGrow UnLeash®

## CanGrow UnLeash® Trial Results

### Independent Study Group Soybean Trial: Northern Iowa

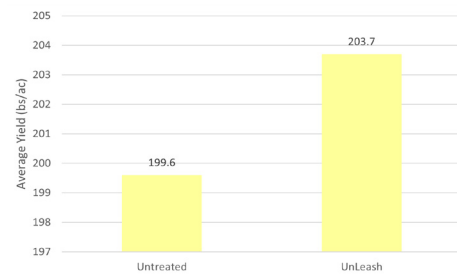

CanGrow UnLeash® was applied broadcast at 950 mL (32 oz)/acre across two sites. The CanGrow UnLeash® treated section resulted in a 6.41 bushel/acre increase.

	Total Area	Average Yield	Yield Increase
Untreated	1.209 acres	62.47 BPA	--
UnLeash®	0.864 acres	68.88 BPA	+ 6.41 BPA

### Independent Study Group Soybean Trial: Clay County, Iowa

CanGrow UnLeash® was applied at a rate of 950 mL (32 oz)/acre on a corn following soybean rotation. The CanGrow UnLeash® treated section resulted in a 4.1 bushel/acre increase.
