

Empower Plants to Thrive All-Season Long

CanGrow ReStoreD™ introduces a revolutionary planter box treatment that enhances seed performance with a soy protein-derived dust. This innovative formula not only maximizes the genetic potential of seeds but also minimizes wear and tear on equipment. It features a 100% renewable, safe dust formulation, leveraging the CanGrow ReStore® microbial team for improved seed emergence and plant fortification with essential nutrients.

Power Up Your Seed

- Enhance microbial diversity and activity.
- Increase seed energy, producing larger root systems and stem diameters.
- Deliver compromised microbes even during inevitable planting delays.
- Includes key amino acids.
- Increase early uptake of key nutrients.
- Improve season-long nutrient uptake and stress tolerance.
- Charged to ensure adherence to the seed.

Application:

For bulk fill planters: Apply to the top of the full pro box and mix thoroughly to ensure an even application to the seed.

For individual seed box per row planters: Add a unit of seed to the box, spread powder on top of the seed and stir the seed until evenly applied to the seed.

Rate:

14 g (0.5 oz)/unit of seed

Corn = 80K kernels / Soybean = 140K seeds

Apply to the seed at planting as a seed lubricant.

A photograph of a single yellow seed resting on a mound of dark, textured soil. In the background, a bright green lightning bolt strikes down from a dark, stormy sky, illuminating the scene.

Trust the Dust!

Trust The Dust!

Environmentally Safe Ingredients

Carcinogen and insecticide-free solution that minimizes health risks for farmers and the environment. A direct replacement for Graphite and Talc.

Powered by ENVIRONOC®

CanGrow ReStoreD™, with ENVIRONOC® technology, enhances emergence, promotes early association, and boosts yield.

The All-in-One Solution!

The ultimate solution for maximizing nutrient transfer, boosting active carbon, improving water efficiency, enhancing photosynthesis, and minimizing stress.

How it Works

Since CanGrow ReStoreD™ is a planter box treatment, it begins to work as soon as your seed enters the soil. Crops are boosted for their entire lifecycle - starting with more even emergence and improved vigour all the way through to the fertility stage. CanGrow ReStoreD™'s season-long performance will be apparent when you see larger roots and wider stem diameters that enable each plant to maximize its nutrient uptake.

- Improved emergence.
- Greater above/below ground growth.
- Increased nodulation.

- Thicker stalk-diameter.
- Heavier shoot weight.
- Improved root development.
