streamed on hill

**Peak Energy**  
foliar with fungicide

**Peak Energy**  
foliar with fungicide

**Peak Energy**  
foliar with fungicide

## Start Strong

**Super Sta-Dry (seed piece treatment):** Super Sta-Dry helps dry seed, keep planter cups dry, and provides added protection to keep plant vigour when it's most needed. Super Sta-Dry contains calcium enhanced with amino acids and enzymes for early seed growth and natural agents which promote drying and corking over.

**PowerStart Row Support (in-furrow):** 6-21-3 2S with micros - PowerStart is a phosphate activator that enhances plant vigour. It ramps up plant metabolism and boosts root development, tuber initiation and retention.

**ReNew (in-furrow):** A diverse team of beneficial microbes that provide plant enhancement capabilities, including vitamin/hormone production, nutrient releasers, and stress reducers.

## Grow Strong

**UnLeash (bio-fertility & residue manager):** The best of a microbial bio-fertility and residue manager/recycler all in one. Teams of organisms that release tied-up nutrients from soil and residue. Can be applied with crop protection products such as herbicides or fungicides.

**UpStart Potato Hiller Mix (streamed on hill):** Provides calcium to help prevent early root diseases and flocculate sodium out of the tuber zone. It's 400 times more soluble than gypsum. UpStart includes controlled-release amine nitrogen, the form that encourages root growth instead of lush vegetative growth found with other N sources.

**Mini Prosett (foliar):** Full complement of highly effective micros to alleviate nutrient deficiencies or address agronomic concerns, including reducing herbicide stress, abiotic stress relief from too hot, dry or wet, re-energizing roots.

**Pivot Power (with irrigation):** Apply Pivot Power with boron and zinc through the pivot 1, 2, or 3 times a season. Pivot Power is designed to control plant growth through nutrition. It mitigates early die symptoms and continues sodium flocculation.

**Cal PG (foliar):** Calcium nutrition that supports the eradication of late blight spores.

**Peak energy (foliar with fungicide):** Built to increase plant energy and supply a strong base of micronutrients. Peak Energy will help increase the number of cells for an overall higher yield potential.

**Power S Mag (foliar):** Nutritional support and disease control enhancement.

## Finish Strong

**CropKarb (foliar):** 8-0-18 0.375B - Includes boron to help set and hold more of the youngest fruit and potassium to improve size and bulking.

**Nexus Downloader (foliar):** Apply late season to increase senescence and skin set.
