Start Strong

Seed Coat (hopper treatment): Replaces talc/graphite and provides nutritional components (2S, 2Zn, 2Mn) and vital amino acid and enzyme-building blocks to promote early-season biological activity around the seed and optimal early root development.

PowerStart (in-furrow): 6-21-3 2S - Neutral starter that lowers pH in the root zone to release tied-up soil nutrients. Contains BioLiNE Gold for stress tolerance / increased nutrient uptake and Can Grow actives for optimum seed establishment. Additional micros (Zn, Mg, Mn) can be included.

ReSTore (seed treatment): A team of multiple naturally occurring microbes that promote germination, provide more robust root mass and plant vigour. Microbes also offer bio-fertility to increase the availability of nutrients in the soil.

ReNew (in-furrow): Diverse team of beneficial microbes for plant enhancement capabilities, such as vitamin/hormone production, nutrient releasers, and stress reducers.

PowerBand (stream NS): 20-5-0 3S, 24-0-0 3S, or 26-0-0 2S - NS solutions that support nitrogen and sulfur plant needs. 100% plant available S. Contains BioLiNE Gold fulvic acid for enhanced use efficiency, nitrogen stabilization and stress support. Can be applied with a pre-emergence herbicide.

Grow Strong

UnLeash (bio-fertility & residue manager): Teams of organisms that release tied-up nutrients from soil and residue. Compatible with crop protection products such as herbicides or fungicides.

NitroK Mag (side-dress / Y-drop): NKMg solutions provide stabilized amine N for increased uptake and maximum efficiency. Potassium supports late-season pod fill, and magnesium optimizes photosynthesis. BioLiNE Gold fulvic for enhanced use efficiency. Optional addition of Zn, B, Mn for plant support.

Max Impact (foliar): 4-20-0 0.9S, 0.2Mg, 0.6Zn, 0.4Mn, 0.2Fe, 0.1Cu - Built to increase plant energy and supply a strong base of micros going into reproductive phases to keep more flowers and develop more seeds per pod.

5% Boron / 10% Manganese / Premium MoCo (foliar): Full complement of highly effective micros to alleviate nutrient deficiencies or address agronomic concerns, including reducing stress.

Finish Strong

CropKarb (foliar): To 8-0-18 0.375B - Apply at heavy blooming, sizing or bulking to increase seed size and weight.

Plus Up Partner Solutions

BioLiNE Gold (starter / side-dress / Y-drop / foliar): Pure, highly concentrated fulvic acid that reduces plant stress and increases nutrient use efficiency.
